RABBIT'S STRANGE REFUGE

Bunny Leads Pursuing Lynx Inte Hunter's Tent and Makes His Escape.

That the instinct of self preservarace is evident from many instances in the experience of hunters in the north woods.

A trapper in the Tahquamenon river country, relates the fact that while seated in his tent one evening at dusl there was a sudden commotion at the entrance and in popped a rabbit. Be hind the rabbit in hot pursuit, came another animal, which fairly sho. down the snow incline into the tent This animal proved to be a lynx.

For a moment it did not dawn upor and was on his feet. The fight that followed was lively and how he man aged to dodge the lynx and also hit if mystery, but it was not long before the lynx was stretched out lifeless The hunter came out of the encounter with a few scratches, and in thmeantime the rabbit escaped.

BALT LANS CITY, UTAH to Writing.

Illinois Agriculturist Who Keeps Close Guard and Provides Shelter for Birds.

John H. Dorris, who owns a large farm northwest of this city, will not allow a bird of any kind to be killed on his land, writes a Harrisburg (III.) correspondent of the St. Louis Globe Democrat." He has set aside a num ber of acres to grow up in under brush, in which all kinds of birds, es pecially quail, find a nome through the winter; and in the summer the place is alive with birds.

Mr. Dorris claims that hawks di very little damage in comparison with the good they do in killing field mice and rats. There are hundreds of quall on his farm, and they have be come so tame that they come to the dooryard for feed. So careful does he watch these birds that he can tel' where nearly every bird nests in the brooding season. Last fall one of his hired hands, while driving through the lane with a load of hay, saw a quas sitting on the fence close by, and taking his whip, he knocked it off slightly crippling it. He picked the

bird up and took it to the house to

feed to the cat. When Mr. Dorris saw this he re buked him warmly, questioned him as to where he found the bird, and upon being told remembered where it has a nest. Unhitching one of the horses and saddling him, he rode a mile and a half, placed the bird on its nest and watched and cared for her until she hatched out her brood. Mr. Dor ris' farm is noticeably free from in sects that do damage to crops, and he unhesitatingly says this is due to the birds on the place.

VINEYARDS IN PORTUGAL.

Grape Growers in Bad Way Over Inability to Dispose of Stored Up Crops.

The distress among the agricultural laborers is taxing, in many parts of tion is not confined to the humar Portugal, the resources of the local authorities, especially in the wine districts of the north, where the crisis seems to be most acute. So keen ap pears to be the distress that the sub ject has been said before the parlia ment

According to the local press in thes districts, whose products in prosperous times are a chief source of the country's wealth, many of the vineyard owners have in their cethers the harvests of two years' grape growth which they are unable to sell, except at a the lynx that it had been caught in a huge sacrifice, and not being able to snare, and then it jumped to the op obtain the cash on which they countposite side of the tent and began to ed for help from bankers and others claw the canvas and snarl. By this to tide over bad times, they have retime the trapper had grabbed a clut solved this year to discontinue in many vineyards the hoeing and other indispensable labor. This has led to non-employment of some thousands in the semi-darkness is, he says, a of hands who could otherwise have counted upon employment.

Hunger and misery, it is said, are seen everywhere, and the poor starving wretches are spreading themselves over the country, to the detriment of others of the working class whose lot is but little better, and resorting to plifering and begging to satisfy theh needs. Instances are said by the press to have occurred where some men who were considered well to dc yeomer have solved for themselves the question of financial difficulties by resorting to suicide.

Some few years ago a regular fever of vineyard making spread over the figures which a city council pab northern half of the country and overproduction has been the result, which wiser Portuguese heads foresaw and avoided, but their warnings were not heeded.

thy Existing Between Jewels and Persons.

Science has come to the fore to testify that the belief that precious stones have a peculiar sympathy with human character and bearing thereon is no idle superstition. A professor of the Paris conservatory of Arts and Crafts notes expressive of love, alarm and says that the mutual attraction of peo-

He throws cold water on the belief that sapphires can open prison doors one another. I might perhaps add to or that diamonds make brave men inthis list the scream of distress which vulnerable. But after three years' experimental observation he maintains that a preference for certain jewels indicates certain temperamental qualities and even characteristic of physi-

For instance, the ruby invariably attracts persons of dark eyes with long eyelashes. The diamond tempts the blue eyed who beast long lashes. And both blonde and brunette alike if of a nervous temperament yearn for

Easy-going natures fall under the spell of blue stones.

But more than all these scientific facts is the discovery that the sympathy of the stone is a sure test of its genuineness. No matter how perfect artificial stones may be, even though made from the dust of the real, having undergone an unnatural crystallization they do not possess the subtle When an easy-going woman turns the cold shoulder on a turquoise collar you may be positive that the turquoise is

Learning Monkey Language. A chair for the study of monkey anugage is to be established in Chicago university. Three dozen monkeys from Central Africa are now on their way to Chicago, there to become the prey of professors, to be forced by kindness to deliver up their conversation. By degrees, it is hoped, the rudiments of monkey talk will be reduced

THE OLD RELIABLE BROWNING BROS. Co., Ogden, Utah

BIRD HAVEN ON THIS FARM BALD-HEADED BRIDEGROOMS

They Are Fine Citizens and It Is No Wonder the Girls Like Them.

An esteemed contemporary has opened the columns to a discussion of the question "Why do educated and refined women marry bald-headed men?" and men with and without hair seem to be considerably agitated over Even women are joining in the assion, and there are as many explanations as there are correspondents. None of them, however, explains, says the St. Louis Globe-Democrat.

It is the form of the question evidently that confuses. It presumes too much and the presumption is accepted as established by the wrangiethey do not question the premise.

Educated and refined women do not as a rule marry bald-headed men, though they do sometimes, when they cannot catch them earlier.

The question deals with particulars as generals. It should be: "Why do women marry men?" And he answer to this, if we do not confuse the issue by the citation of examples, of which we remark: "What on earth did she see in him?" is simple.

Women marry men to get husbands. Men marry women to get wives. Fat, lean, young, old, hirsute and bald, all marry for the same reason. "It is not good for man to live alone."

Anyway, why should the bald head be brought into the limelight in 'his spectacular way? Is it not conspicuous enough as it is to attract much undesired attention without forcing the

Bald-headed men are worthy citizens. They must be, for they are always under inspection. A bald head is a light that cannot be hid under a bushel, it may not conceal itself. If it frolics somewhat gayly, the world says: "Behold you shameless one!" A bald head must perforce seek vir-

tuous ways. There are few or no baldheaded villains. They are scarce as fat beggars. Let not the finger of scorn be pointed at the bald head for that he marries a "refined and educated woman."

It is to his credit. The bald head sets an example that the hirsutely rich might emulate with profit. The bald head is the symbol of lofty citizenship and "shines" like a good deed in a naughty world.

BUSINESSLIKE GOVERNMENT

City of England That Is Run on Simple Yet Very Effective System.

The government of Manchester is a business. Its liabilities are about \$156,000,000; its assets are about \$147,000,000; and the deficiency, about \$9,000,000, represents the amount which the ratepayers have to contribute each year, writes Samuel Merwin, in Success Magazine. The figures indicate that it is a big business. The management of this big business is absolutely in the hands of the city council acting through its committees. As I have said, the system is simple, and the responsibility cannot be evaded as it can be in a muddled-up, complicated system like that of New York or Chicago or New-The people know what has to be done, and they know who has to do it. But, even at that, big figures are confusing to the average mind. And then, too, it is well to submit lishes to an unsympathetic eye. And so, because the people of Manchester propose to know what is done, with their money, they have in their service two men whose business it is to investigate and publish, at regular intervals, every tendency of the council toward carelessness or extravagance. Never for a moment are the councillors permitted to forget whose money it is that they are managing

with such fluent ease. These two men are known as "elective auditors." They are elected directly by the people, and the more merciless their attacks on the council the better they please the people. They are free from the slightest obligation to the council. They have access to all facts and figures, for the people of Manchester find it difficult to understand why their government, managed by their personal representatives with their money, should not work wholly in the light. These reports are published weekly in th Manchester "City News."

HENS OF HAWAII FAIL.

Climatic Conditions Said to Be Unfavorable to the Egg Supply.

The chickens in Honolulu, for reasons best known to themselves, have positively refused to lay eggs. As a consequence good laying hens are much in demand in San Francisco for shipment to the Hawalian islands, says the San Francisco Examiner, of

recent date. Every steamship that leaves for Honolulu carries a large consignment of laying hens and the supply is not equal to the demand. "Climatic conditions" is the excuse put forward for the failure of the Honolulu hen to lay. The middle western states, as well as California; export chickens to the islands, the yearly shipment for the islands averaging 400 carloads of dressed and "60 carloads of live poul-

try. "All the best laying hens that can be secured in California are shipped down to Honolulu at the present time." said a commission man. "For some yet undiscovered reason the hens raised in the Hawaiian islands are not good egg producers, and as a result we have orders to ship all the good laying hens that we can down to the islands."

How Germany Curbs Automobilists. The German government's proposed way of punishing automobilists who run down the people of the countryside is worth considering. Embodied in a bill is the scheme obliging automobilists to pay life annuities to those dependent on persons killed by their motor cars or to those permanently injured by them. The owners of the cars and not the chauffeurs would be held responsible and the annuities

would be assessed by the courts.

## THE SEISMOGRAPH THE PASTORAL NAVAJOS.

INSTRUMENT WHICH TELLS OF EARTHQUAKES.

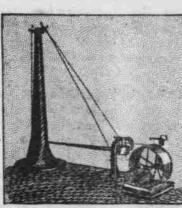

Every Movement of the Earth Is Accurately Recorded at Washington Office-Becord of San Francisco Earthquake,

If science has not as yet discovered any method by which the coming of an earthquake can be foretold, it has perfected a delicate instrument which with the utmost accuracy tells the story of the vibrations when they do occur. This justrament is the sels mograph, and the record which it has left of the recent upheaval at San Francisco has eccupied the attention of scientists since then and drawn the eyes of the general public to the instrument itself, and people are asking what the seismograph is like and how it works.

It seems wonderful that an instrument located at Washington could be able to record the earthquake at San Francisco, but such is the case, in fact no vibration of the earth surface anywhere on the globe, however slight, goes unnoticed by this sensitive little earthquake detective. Up to the time of the upheaval which leveled the Pacific coast metropolis the delicate needle of the seismograph had been tracing long, straight white lines on the gelatined surface of the record sheet Wednesday morning, when it suddenly became agitated at eight o'clock 19 minutes and 20 seconds. and began to make more or less clongated waves. At 8:25 o'clock the strong waves began, and the recording needle moved rapidly back and forth across the sheet. Then followed the most violent waves between 8:32 and 8:35 o'clock, seventy-fifth meridian time, as is shown by the record. At one time the motion of the needle was so vigorous that its point went off the sheet, which it kept in motion by a clock machine, and the point did not return to the sheet until there was a secondary lull in the great disturbance. Then, when the needle had resumed its tracings, the earth vibrations and waves continued until 12:35. when the agitations ceased.

Each of the lines on the record sheet represents an hour of time, the movement of the sheet keeping time with the tick of the connected clock. The units of time are marked on this sheet. which is covered with gelatine, and thus the observer is enabled to tell just when the earthquakes began and when they ended by the markings made by the needle point.

This instrument, which is said to be one of the finest in the world, was in stalled by Prof. Willis L. Moore, chief of the United States weather bureau. and is under the immediate control and supervision of the earthquake or seismographic division of the bureau. Prof. C. F. Marviu is head of this division, and since the San Francisco disaster has shown and described the instrument to many visitors. It is installed in a basement apartment

THE SEISMOGRAPH.

away under the weather bureau building far removed from the noisy hurlyburly of the streets, and is practically a mechanical recluse.

This instrument is of a very superior type, and gives an accurate record of the movement of the earth at the pendulum in the horiontal plane

The mechanical principles involved in the construction of a seismograph of this type were first developed and applied to the measurement of earthquakes in the latter part of 1880 by James A. Ewing, then professor of me chanical engineering at the University of Tokio, but now professor of mechanism and applied mechanics at the University of Cambridge, England. Numerous modifications have since been incorporated in the instrument by Gray, Omori and others, and in its present form it is well adapted to measure and record all kinds of earthquakes, except, perhaps, the most destructive, and is especially suited to register the feeble, unfelt earthquakes which frequently occur in all parts of

the world. The instrument in the basement room of the weather bureau is in stalled on separate castings secured to thick blocks of stone cemented firmly into the concrete floor of the building and projecting but a few inches above the floor level. The foundation of the instrument is separate from the building, being far down in the earth, so that it will not be affected by artificial disturbances.

The extreme sensitiveness of the seismograph is shown in the following statement made by Prof. Marvin: "The extreme sensitiveness to tilting is exhibited in several ways. The weight of the observer almost anywhere on the floor of the small room in which the instrument is installed suffices to tilt the pendulum enough to show on the record, a large displacement is produced by standing at one side of the pedestal.

Of Course.

Young Patient-I can't pay the bill. doctor. It's exorbitant. I'm no better than I was, either. Doctor-That's because you didn't take my advice.

"Ah-well-of course, if I didn't take it, I don't owe you for it. Thanks. Good morning.-Royal Magazine. In Evidence.

Gray-You don't agree, then, that seeing is believing?" White-Not much. I see some people every day that I never could believe.-Cassell's Journal

Habits of This Tribe of Indians and Their Homes in the Southwest.

The Navajos are a pastoral, patriarchal, semi-nomadic people. 'a heir whole culture and development centers in their flocks. Their reservation of 12,000 square miles is desert, broken with mountain and mesa. On the mesa and low mountains there are considerable areas of pinon and cetar, and on the higher mountains a limited area of beautiful pine forests, writes E. S. Curtis, in Scribner's. Over this region the Navajos drive their flocks. At the season when the slight rainfall gives even a scant pasturage on the desert plains, the flocks are pastured there. As the pasturage on the lower levels is both burned with the hot, scorching sun and exhausted with pasturing, the flocks are taken up into the higher mountains, where there is more moisture. Again as the deep winter snows come on the sheep must be taken down out of the mountains to escape them. During this time they are kept on the wooded mesa, where there is less snow, and a plentiful supply of wood, of which there is none on the plains below. Year in and year out the Navajo flocks are driven back and forth from plain to mountain-top, mesa and foothills.

While the Navajo's life is a wandering one, he is not what could be called a true nomad. His zone of wander ing is limited; on the same grounds his father and father's father have kept their flocks. The average Navajo could not guide you a distance to exceed 50 miles. Last season the writer had with him two Navajo men of middle age, who had lived their lives within a day's ride of the mouth of Canyon de Chelly, and this was the first time they had traveled the entire length of the canyon. This seems strange, from the fact that it is a most remarkable scenic spot, and the larger part of the great wealth of Navajo legendary lore centers in this canyon. The Navajo family usually has three homes, the location of which is determined by the necessities of their

life. One is the summer home, where they grow their small crop of corn and vegetables. The farming they do in the narrow sandy washes, where, by planting to a great depth, they get sufficient moisture to mature the crops. In a few limited areas they have irrigated farms. In Canyon de Cheily, which may be termed the "garden of the reservation," there are tiny irrigated farms and splendid peach orch-

CELERY GAINING IN FAVOR.

Grows Best in the Rocky Mountains, Where It Is Neglected by Farmers.

Celery is a native of Europe, where it has always been much more used than here, not only in salads and as a relish, for which it is still principally demanded in this country. but as a seasoning for soups and other dishes and cooked by itself like any other vegetable. Its traditional place on the American table has heretofore been with the turkey and cranberry sauce at Thanksgiving and Christmas and other special feasts, but of recent years it has come into more general use at all times of the year, while as one of the ingredients of salad it is more than holding its place, despit the coming of so many new dishes of the salad family.

The old discussion as to whether celery is properly a winter or a summer food is rapidly giving way before the generally accepted idea that it is a good thing to eat it whenever it can be had, and in Philadelphia this means all the year. It is definitely established, too, as a nerve tonic harmless in large or small quantities.

While it is extremely perishable after it has once been harvested, and loses rapidly the crispness which makes one of its most delightful characteristics, it can now be had after being only a little while out of the ground; also from many climates in rotation. Besides, there are ways of storing it and keeping it in good condition before it is picked-or, rather, pulled up by the roots-Littl the market calls for it. The all-season supply comes from as far south as Florida

and as far west as California. Curiously enough, the Rocky moun tain celery, which is declared by connoisseurs to be superior to all other varieties, does not reach this market or any other. This appears to be a case of a neglected industry among the mountaineers, who are too busy with mines and cattle and some fruits to raise more than enough celery for their own consumption. "Right in the heart of the Rocky mountains," says a man who has been there, "where celery is so much better than anywhere else that it seems like a different thing, it is hard to get and high priced."

Modern City Travel. Perhaps the next improvement in

methods of travel in the large cities will involve the use of the pneumatic tube. Living parcels were experimented with in Philadelphia not long ago, and the result was surprisingly successful. A bantam rooster was put in the carrier and forced through the tube to a station a mile and twofifths away. The first thing he did when taken out was to crow, as if in celebration of his achievement. Later two pupples and two guinea-pigs were sent through, and a glass bowl filled with water containing several goldfish. None of the creature suffered injury .- Youth's Companion.

Already Punished. The slum sociologist looked properly supercilious.

"My good woman," he asked, "do you believe in the whipping post for wife beaters?"

"Naw," said the muscular matron, "but I believe in the hospital for any wife beater that tackles me."-Brook lyn Eagle. Evidence at Hand.

"Death often changes aversion into love," remarked the man who has a mania for handing out quotations. "That's right," rejoined the ordinary merts. "I have an antipathy for hogs, but I dearly love sausages. -Chicago Daily News.

## A WOMAN'S ORDEAL **OREADS DOCTOR'S QUESTIONS**

usands Write to Mrs. Pinkham, Lynn, iss., and Receive Valuable Advice solutely Confidential and Free

There can be no more terrible ordeal to a delicate, sensitive, refined woman than to be obliged to answer certain questions in regard to her private illieven when those questions are saked by her family physician, and many

continue to suffer rather than submit to examinations which so many physicians propose in order to intelligently treat the disease; and this is the reason why so many physicians fail to cure female disease.

This is also the reason why thousands upon thousands of women are corresponding with Mrs Pinkham, daughter-in-law of Lydia E. Pinkham, at Lynn,

sponding with Mrs Pinkham, daughterin-law of Lydia E. Pinkham, at Lynn,
Mass. To her they can confide every
detail of their illness, and from her
great knowledge, obtained from years
of experience in treating female ills,
Mrs. Pinkham can advise sick women
more wisely than the local physician.
Read how Mrs. Pinkham helped Mrs. T.
C. Willadsen of Manning, Ia. She writes:
Dear Mrs. Pinkham:

"I can truly say that you have saved my
life, and I cannot express my gratitude in
words. Before I wrote to you telling you
how I felt, I had doctored for over two years
steady, and spent lots of money in medicines
besides, but it all failed to do me any good. I
had female trouble andwould daily have fainting spells, backache, bearing-down pains, and
my monthly periods were very irregular and
finally ceased. I wrote to you for your advice and received a letter full of instructions
just what to do, and also commenced to take
Lydia E. Pinkham's Vegetable Compound,
and I have been for you I would have been
in my grave to-day."

Mountains of proof establish the fact
that no medicine in the world equals
Lydia E. Pinkhau's Vegetable Compound.

that no medicine in the world equals Lydia E. Pinkham's Vegetable Compound for restoring women's healtn.
